Roller Blind Systems

World-class, fully featured systems designed in Australia.

Roller blind systems reinvented by Blindware
At Blindware, we really do believe that your success is our success. Our primary objective is to help our customers create new and profitable sales opportunities. Sales generated by strong product features and benefits that are real and resonate with purchasers. Features and benefits that differentiate you from the competition. SunBoss is that opportunity!

**Why SunBoss?**

Over the past 10 years, our aim has been to develop market share through innovation in all that we do. To create strong competitive advantages for our customers. To provide stronger selling stories. To simply provide better systems at prices that make sense.

When it comes to roller blind systems, SunBoss is the embodiment of that philosophy.

Designed by Blindware, SunBoss reinvents the roller blind system!

Smoother, quieter clutches and a wide range of modular components combine to meet the demands of any application, residential or commercial. Double brackets, spring assists, the widest range of linking options, fascia/cassette and ease of motorisation are also key features. Designed in Australia, SunBoss will change how you think about roller blind systems.

**SunBoss system summary**

- Direct drive and geared clutches
- 28, 32, 38, 43, 50, 63mm tubes
- Single and double brackets
- Link brackets – independent + multi-link
- Universal coupling for bay windows
- Spring assists, Light, Medium and Heavy
- Blackout Cassette + Side Channels
- Fascia – 75mm, Square + Round
- Top rail system
- Easy motorisation

**SunBoss**

**Australian designed for the world**

SunBoss is simply the better alternative.
With superior performance at a price that makes sense, SunBoss provides peace of mind.

**Centre bracket system like never before**
The SunBoss centre bracket system leads the world for ease of use and flexibility. The configurable design means one bracket can be configured to provide three separate functions, i.e. pin-to-pin operation, linked blinds or fit the universal coupling insert for bay windows.

**Fully motorisable and very, very quiet**
Our superior soft rubber drive components insulate the blind from the noise and vibration created by the motor. Any SunBoss bracket can be easily motorised with exceptional performance!

**Spring assist mechanism for larger blinds**
No matter what size blind, if it runs on one of our tubes from 38mm and larger, then we have the spring assist to suit. Fitted to the clutch, the SunBoss spring assist will make easy lifting a reality for your customers.

**Fascia and Cassette**
Our fascia systems look fantastic and are easy to use. Available in square and rounded profiles, the fascia is ideal when you need to cover the blind roll or just finish a job to perfection. There is also a superior blackout cassette available, which features 80mm cassette box and 360 degree wrap-around side and bottom channels to provide 100% light blockage. The SunBoss cassette provides industry leading performance!

**Modular by design**
The direct drive clutch and geared clutch are both sized to fit directly into 38mm tube. The clutches continue the tradition of using tube adapters to work with larger tube sizes - incl 43mm, 50mm and 63mm. The same also applies to other running parts, such as the pin end and link drives. Brackets are universal in nature, allowing simple switching of clutch and pin to either side of the blind. This reduces inventory and simplifies system use.
The clutch, the heart

We all know that the body does not function without a sound heart. The clutch is the heart of the roller blind. SunBoss is that heart. It boasts many advanced features that make it different to any roller blind clutch you have ever seen before.

As one of Australia’s leading roller blind component wholesalers, we understand the key elements that create a great product. As a result, the SunBoss clutch is truly different. Smoother, quieter and more stable in the brackets, SunBoss raises the bar on performance.

Key features include:

✓ Direct drive clutches for everyday use and geared clutches for larger blinds. The geared clutch utilises our unique HardCore™ metal core technology that surrounds the core of the clutch to make it smoother, quieter and more durable for the long term.

✓ New design eliminates the chain guard for smoother and quieter performance and less damage in transit.

✓ Inside the direct drive clutch are 4 springs, improving the long term comfort and strength of the clutch.

✓ Universal spring assists fit both clutches.

✓ Unique Stabiliser Bar keeps the clutch held more firmly in the brackets for smoother operation.

✓ Suitable for use with 38mm, 43mm, 50mm and 63mm tubes, using tube adapters.

✓ Easy two-stage opening that is quicker and easier to fit chains.

✓ System is available in 5 contemporary colours: white, grey, ivory, latte, black.

The spring assist, the muscles

The reinvention does not stop at the clutch. The spring assist mechanism has also been subjected to a major design review and has emerged dramatically different. Foam now surrounds the aluminium shaft to reduce noise as the spring operates.

Rubberised wheels run smoothly and quietly inside the tube, with wheels available for each tube size. The sheath also utilises soft rubber making the SunBoss system quieter, smoother and stronger than any of its predecessors.

Springs are available in light, medium and heavy duty versions to handle all blind sizes with both left and right hand operation. The same springs fit either the direct drive clutch or the geared clutch, for truly modular performance.
SunBoss boasts a full suite of end brackets like no other system. All brackets are universal in nature and can operate in many different configurations, including accepting the clutch, the pin end or even both in a head to tail configuration. Bracket covers are also available and easily fitted.

Single brackets – 40mm, 55mm and 75mm projection.

Double brackets – Traditional P-Shape versions, Vertical compact and Double recess design (suit min. 150mm ceiling recess).

Almost every problem solved in one product range.

Our centre bracket system is modular by design, readily matching every end bracket in our range. The key feature of our centre bracket range is the flexibility of the insert system. Using a common metal bracket, the insert can be changed to create independent links (pin to pin connections), linked blinds (multi-links) and universal joint coupling for use in bay windows etc. All from just one bracket type! There are even centre brackets available for our fascia and cassette systems.

When coupled with our adjustable link drive, levelling base rails has never been simpler. Just turn the adjustable link and base rails become level in seconds, even when used in bay windows.

We also have the ability to do customised bracket solutions where required. The unique flexibility of the SunBoss bracket system can solve all installation problems quickly and cost effectively.
The SunBoss fascia creates a modern finish that will enhance any installation, either residential or commercial. Available in square and rounded profiles, the SunBoss fascia will excite your customers.

To better match the interior décor of your project, our fascia profiles are available in three standard matt colours - white, cream & black, plus clear anodised and mill finish for custom projects. Not surprisingly, we go the extra step to ensure the finish you achieve is exceptional. Our anodised finish is nothing but perfection, bead blasted and then anodised to 20 micron depth to remove all imperfections from the extrusion surface.

**Cassette**

With the SunBoss cassette you no longer need to compromise when it comes to blackout blinds – on style, appearance, performance or flexibility! This sleek system offers attractive contemporary looks and total light blocking with a unique wrap around design.

**Cassette Features:**
- Stylish square-line appearance
- Compatible with SunBoss roller blind components
- Side channel profiles also form optional bottom channel
- Optional bottom rail version available
- Fully overlapping joints, zero light pass*
- Centre link available for multi-linked blinds or left/right control
- Simple fabrication
- Easily motorised
- 10 year warranty

*using patent pending light blocking technology

**Cassette Specifications:**
- Slim 86mm x 92mm top cassette profile
- 50mm x 21mm 2-piece side channel design
- 100% light blocking when used as full wrap around system
- Available in 3 standard colours: white, black and anodised, plus mill finish for custom projects
- Felt strip channels provided
SunBoss systems will change your perception about blind motorisation. Quieter, simpler and more reliable operation are the key outcomes from our years of experience. Whether it be using our in-house Motolux motors or motors from a third party supplier, our easy-to-use adapter disks allow every bracket in the SunBoss range to be easily motorised.

Also, our unique soft rubber crown and wheel kits dramatically reduce noise emanating from any motor.

In fact, our lower noise levels will only be consistently beaten by MUCH more expensive Quiet Motors. Blindware and SunBoss are the experts when it comes to motorising roller blinds.

Software support tools

Blindware also provides superior technical support with several software tools available to help you calculate best tube sizing, motor torque and other technical data, plus we can provide full bill of materials software.

Our bill of materials calculator has been developed to determine precise list of parts required and product costs for almost every possible configuration of roller blind, including project costing. All tools run on MS Excel and are very easy to use.

SunBoss is simply the better alternative.
Our commitment to you...

Based in Melbourne, Australia, Blindware is a supplier of internal blind systems and components for the world market. Since being established in 2006, Blindware has emerged to become one of Australia’s leading independent hardware system suppliers, as well as a significant supplier of fabrics and motorisation systems. This holistic view of the blind provides us with a unique and capable focus on product developments that assist the practical manufacture, installation and use of internal window blind systems. Systems are designed for the world market and offer many intrinsic advantages over other products.

Our other blind systems and products include:

- ✓ Vertical blinds
- ✓ Panel track
- ✓ Motorisation
- ✓ Screen fabric
- ✓ Blockout fabrics
- ✓ Commercial fabrics
- ✓ Wood venetian
- ✓ Aluminium venetian
- ✓ Accessories
