Child Safety

A global issue

It can happen so quickly. Blind safety is about protecting children, something in the hearts and minds of all parents. Blind cords are increasingly on parent's radar worldwide as a potentially deadly threat to children.

New laws are now being introduced in some countries to eliminate cords and chains from blinds to help improve safety. It's a high visibility issue internationally and affects everyone within the global window coverings industry.

Child safety is always on the minds of young couples looking to start a family, or families wanting to increase the safety of their homes. These consumers need the complete peace of mind that comes with knowing their blinds are safe, made without chains and cords that might be hazardous to their loved ones, without having to resort to expensive motorisation options.

ZeroGravity™ creates blinds and shades with perfect balance. As a result, the shade can be raised and lowered by simply urging the base rail up or down by hand with almost zero effort. The blind will stop precisely and stay in perfect position. No chains, no cords, completely safe.

3 MODES OF OPERATION:

- > Chainless Operation
- > Chain Operation
- > Motorised Operation

ZeroGravity™

100% cordless, 100% safe

Chain Operation

If you cannot avoid installing shades that use chains, then the addition of (patent pending) ZeroGravity™ technology transforms the shade into something very different. It's perfectly balanced, and can be raised and lowered with almost zero effort- no matter how big the shade.

Motorised Operation

If it's motorised blinds you want, the ZeroGravity™ technology can be easily motorised. Using spring technology that has been perfectly balanced, a small capacity DC motor can lift a blind of almost any size. Batteries will last up to 10 times longer (as tested by Blindware) since the motor is doing almost no work to lift the blind when used in conjunction with ZeroGravity™ technology.
