

# ZERO GRAVITY

**ROLLER BLINDS FOR  
THE AGED CARE INDUSTRY**

# WHAT IS ZEROGRAVITY?

**ZeroGravity®** is a simple and highly effective technology that reduces the effort needed to operate indoor roller blinds/shades of all sizes. The unique design uses a specially developed balanced spring technology that perfectly counteracts the weight of the blind, reducing the normal lift effort by 50-75% vs other typical blind systems.

As we age, losing body strength and perhaps suffering the effects of Arthritis in the hands and fingers, the effort to undertake simple daily tasks such as raising and lowering blinds can be very difficult. Poor quality blind systems can increase the effort required by more than 2-fold. When using the patented **ZeroGravity®** lift assistance system, the blind can be easily raised or lowered with the lightest pull of the chain, perfect for Aged Care/Aged Living accommodation.

**ZeroGravity®**, is an optional lift assistance product within the SunBoss hardware system for roller blinds/shades. **SunBoss** is a globally sold hardware system, developed in Australia! **SunBoss** clutches provide premium operating performance, but at prices that make sense for consumers and Aged Care facility operators. When couple with **ZeroGravity®**, blinds can be operated with feather light operation, which makes it a product ideally suited for the aged care industry. Completely versatile, it works with almost any blind width, tube diameter or fabric type.
